

Why should I not be aloud to have traffic and weather on XM Satellite Radio in which I pay for monthly? I use this as a tool to judge how heavy I should dress for the day or if I shoudl be leaving early or taek a different route to work. It should not effect any other braodcasting service because the only people who recieve this information are people who subscribe to the XM service. The are more people WITHOUT this service than there are with the XM service. Although it is growing but will never be able to overtake the local weather and traffic services.
